Structure and Question Types for the 2022 STAAR

Assessments

The 7th grade STAAR test 2022 featured a variety of question formats designed to assess different cognitive skills. The primary format for most questions was multiple-choice, where students selected the best answer from a given set of options. However, the STAAR test also incorporated other item types, particularly in mathematics, to provide a more comprehensive evaluation of student abilities. Understanding these question types is vital for effective preparation and for knowing how to approach each item strategically.

Reading Question Formats

In the 7th grade STAAR Reading test 2022, students encountered a range of question types. These included:

- Multiple-choice questions that required students to select the best answer based on their interpretation of the text.
- Multi-select questions, where students had to choose more than one correct answer from a list of options.
- Hot text questions, where students had to highlight specific words or phrases in the passage that answered the question.
- Evidence-based selected response questions, often referred to as "pair" questions, where one question asked for an answer, and the second required students to select the text evidence supporting that answer.

These varied formats ensured that students were tested not just on comprehension but also on their ability to locate, analyze, and present supporting details from the reading passages.

Math Question Formats

The 7th grade STAAR Math test 2022 also utilized a mix of question types. Beyond traditional multiple-choice questions, the test included:
