2. **Line:** A straight one-dimensional figure extending infinitely in both directions.
3. **Angle:** The figure formed by two rays sharing a common endpoint called the vertex.
4. **Polygon:** A closed plane figure with three or more straight sides.
5. **Parallel Lines:** Lines in the same plane that never intersect.
6. **Perpendicular Lines:** Lines that intersect at a right angle (90 degrees).
7. **Congruent:** Figures or segments that have the same size and shape.
8. **Bisector:** A line or segment that divides an angle or segment into two equal parts.
9. **Radius:** A segment from the center of a circle to any point on the circle.
10. **Diameter:** A segment passing through the center of a circle with endpoints on the circle, twice the length of the radius.
