Overview of ICS 100 and FEMA

The Incident Command System (ICS) 100 course is a critical component of FEMA's Independent Study Program, aimed at introducing emergency responders and officials to the fundamental principles of incident management. FEMA, as the primary federal agency responsible for disaster preparedness and response, developed ICS to provide a standardized approach to command, control, and coordination during emergencies.

ICS 100 serves as the entry-level course that familiarizes participants with the structure, roles, and responsibilities within an incident command system. The course is widely used by public safety personnel, emergency managers, healthcare providers, and other stakeholders involved in disaster response operations. Understanding the ICS framework helps ensure that responders can work collaboratively and efficiently during emergencies of any scale.

What is the Incident Command System?

The Incident Command System is a standardized, on-scene, all-hazard incident management concept designed to enable effective and efficient domestic incident management. ICS integrates facilities, equipment, personnel, procedures, and communications within a common organizational structure.

This system is flexible and scalable, adaptable to incidents of any size or complexity. It is built on principles such as chain of command, unity of command, and modular organization, which facilitate clear communication and resource management during incidents.
